Perfect for applications at **high temperature** (max. 60°C) that require a **high working space**. This model is ideal to remove gaseous polluting agents and/or solid particles/aerosols from the working space in a simple, efficient and cost effective way, protecting both the user and the environment. **CRUMA 1010** ductless fume hood uses the CRUMA filtration system.

Cruma ductless fume hoods designed to handle low toxic products are made of steel plate with antiacid polymerized epoxy coating and methylpropileno of high resistance.

**PROTECTION OF AND RESPECT FOR THE ENVIRONMENT** –The toxic chemical products are not released outside but retained within the filter.

**COST SAVINGS AND FAST SET UP** –No building work is needed to install ducts to channel the gas outside, which means fewer problems for a laboratory working at full capacity.

**FLEXIBLE** –It can be used in areas where it is difficult to remove/extract contaminated air, such as from the lower levels in buildings that have a number of floors.

**ENERGY SAVINGS** –The air that is sucked in is not expelled but recirculated back into the lab after the contaminating substances have been removed. This means that it is not necessary to increase the use of the air-conditioning or heating systems to compensate for the air removed.

**CERTIFIED** –Manufactured in Spain and certified by an external laboratory according to international standards and applying the criteria of ISO 9001.

## FILTER TYPES

<b>Type A</b>	For <b>organic vapors</b> such as ketones, ethers, alcohols, xylenes ... Eventually it can be used for inorganic acids, but only if used in small quantities because this activated carbon is not impregnated and the excess of acid vapors could saturate it quickly.	<b>Type K</b>	For <b>NH<sub>3</sub> vapors and amines</b> ; also good for other organic compounds. Carbon with metal salt complexes impregnation.
<b>Type BE</b>	For <b>inorganic acid vapors</b> as H <sub>2</sub> S, SO <sub>3</sub> , ... It can be used with organic vapors because the activated carbon incorporates impregnation of metal compounds and neutralizing salts. It is also suitable to filter organic and inorganic compounds when they are in similar proportions.	<b>Type ABEK</b>	<b>Mixed type</b> to be used when the ratios between organic, inorganic and NH <sub>3</sub> /amines are similar.
<b>Type F</b>	For <b>formaldehyde vapors</b> and derivatives; also good for other organic compounds. Carbon impregnated with Cu leads, so that it should never be used with inorganic acid vapors.	<b>Type D</b>	<b>HEPA H-14 filter</b> (High Efficiency Particulate Air, according to EN-1822: 1998) for filtering dust and smoke particles.
